

## MANUAL TRANSACTION DRAWER

This drawer like the powered model is constructed of high tech machined components and designed for the rigors of a drive-thru environment. The drawer was built to provide the maximum in customer and employee conveniences.

The drawer's design allows for easy operation using a 2 to 1 movement ratio. For every one inch of force applied to the handle the drawer moves two inches. An additional operator convenience is the use of compression seals, versus brushes, around the exterior door and a slide door around the handle preventing outside air from entering when the inside door is open and the handle is being moved.

Customers can access the drawer either from the top, in taller vehicles, or from the front. This drawers large transaction hold down bar is also a plus preventing currency and paper transactions from blowing away.

The outer shell of this drawer is 11ga. cold finished steel and the drawer bin is .050" aluminum. The .080" aluminum door drops down and toward the building reducing the chance of the operator hitting a vehicle. The bin size is 16" deep x 11" wide x 6-1/4" tall with a maximum extension of 15".

The Manual Transaction Drawer comes with a one year limited parts warranty and can be shipped overnight via UPS if an emergency requires it. The normal lead-time on this drawer is 2 weeks.
